moor and low-moor bog: Tiefenwald

🕒 Sunday 10:00 o'clock

Discover a species-rich core area in the Biosphere Park Großes Walsertal with rare plants.

Level of difficulty

Duration: approx. 2.5 hours

Walking time: approx. 1.5 hours

Elevation gain: approx. 100 m

Price

free of charge as part of the Vorarlberg biotope excursion program

Equipment

Wear waterproof shoes if available.

Description

As well as an extensive low moor, the Tiefenwald moor is home to the only raised bog in the Großes Walsertal Biosphere Reserve, with very rare plant species such as sundew, cranberry and marsh lycopod. In the species-rich fens, the orchids, some of which occur in large numbers, the rare feverfew and, in late summer, the swallow-leaved gentian are particularly striking. Because of its rarity and species richness, the bog has been designated a core zone of the Großes Walsertal Biosphere Reserve, a habitat particularly worthy of protection.

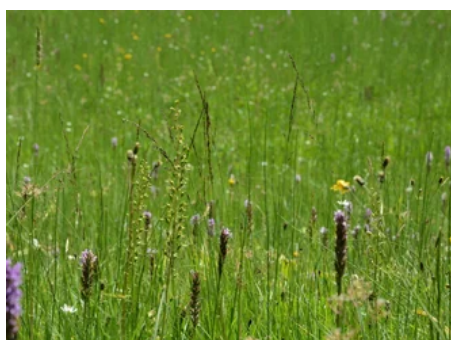

Speaker: Günter Bischof, botanist and hiking guide

Anmeldung

Until August 8, 2025, at 12:00h , info@grosseswalsertal.at, T +43 5554 200 10
